

## Newsletter April 2010

Volume 1, April 2010

### Chlorine Dioxide

You are certainly aware how important water is. Definitely if it matters drinking water for humans or livestock. We all know that disinfectants such as chlorine do not provide the solutions to meet an outstanding and safe drinking water quality. Chlorine dioxide molecules have proven that its unique characteristics provide, even at constant low dosing levels, an outstanding removal of biofilm and pathogen free drinking water at the far end. Chlorine dioxide is actually very cost effective and easy to apply in any water system. We believe DutriClean has to be your new choice for water improvement.

Safe and Healthy Water

### Dutrition Tablet

Our company produces several chlorine dioxide products. Customers are very enthusiastic. Besides the 2-component product we manufacture unique effervescent tablets. Advantages are the simplicity, quick reaction time, high quality, increased safety and finally also pricing.

### DutriClean Dosing unit

Another important aspect of chlorine dioxide has always been a correct dosing and the storage of the liquid stock solution. For this reason we manufacture our own units, particularly for a wide variety of on-farm applications. Our newest DutriClean units prevent any limitations with applying chlorine dioxide and support farmers to operate constantly at the preferred dosing level. It all helps, and even more, to boost the technical performance of productive animals. Installation is quick and the 4-step controller ensures visible guidance.

"Compared to any other chemical method, the chlorine dioxide process is a much better solution for eliminating pathogens."

### DutriClean Products

Our Unit

With pride we present our products during the upcoming VIV exhibition in Utrecht from April 20-22. We invite you to meet our team and have a close look at DutriClean chlorine dioxide, our DutriClean dosing units and DutriDry. In advance you can take a look at [www.dutriclean.com](http://www.dutriclean.com)

DutriClean chlorine dioxide has been approved according NSF.60 for chemical treatment of drinking water for humans and animals.

### Partners

We are still looking for more distribution partners in several countries for our full DutriClean product line. If this might be an option for your company, please contact us and tell us about your business. ([info@dutriclean.com](mailto:info@dutriclean.com))

### 20-22 April

We look forward to meet you during the VIV in Utrecht, hall 10, booth AO23.
